## AEROLOGICAL OBSERVATIONS FOR THE YEAR 1933

By L. T. SAMUELS

[Aerological Division, L. T. Samuels, temporarily in charge]

Mean free-air temperatures for the year at the stations shown in table 1 were mostly above normal with the largest departures occurring at Dallas and Omaha. Free-air relative humidities averaged above normal except at Omaha and Norfolk where they were below normal.

Kite observations were completely discontinued by the Weather Bureau upon the closing of the Ellendale, N.Dak., station in June 1933, and a new airplane-obser-

vation station was established in July at Pembina, N. Dak. Owing to decreased appropriations, the airplaneobservation work was discontinued at Atlanta and Chicago on June 30. Airplane observations were made on all but 2 days during the year at Dallas, on all but 12 days at Cleveland, and on all but 14 at Omaha. The average height reached in these observations was 5 km.

During the International Polar Year, which ended August 31, 1933, a total of 234 sounding-balloon observations were made at 3 stations. The number of these instruments found and returned was 197 or 84 percent. In practically all cases the observations extended into the stratosphere.

Table 1.—Free-air temperatures and relative humidities obtained by airplanes during 1933

Times of observations: Weather Bureau, 5 a.m.; Navy, 7 a.m., E.S.T.

## RIVERS AND FLOODS

By Montrose W. HAYES [In charge River and Flood Division]

During December 1933 there were floods in the Green River of Kentucky and in the Columbia Basin. A discussion of these overflows, together with a statement of

flood losses during the year, will appear in a later issue of the REVIEW.

¹ Temperature departures based on normals determined by extrapolating latitudinally those of Royal Center, Ind., and Due West, S.C. Humidity departures based on normals of Royal Center, Ind.
¹ Temperature departures based on normals determined by interpolating latitudinally those of Groesbeck, Tex., and Broken Arrow, Okla. Humidity departures based on normals of Groesbeck, Tex.
¹ Naval air stations.
¹ Temperature and humidity departures based on normals of Drexel, Nebr.
¹ Surface and 500-meter level departures omitted because of difference in time of day between airplane observations and those of kites upon which the normals are based.
